

### Workshop on Copernicus uptake by public authorities

### Gabriel Mavrellis CEO, Geospatial Enabling Technologies

## Copernicus Data Driven Services for Regional & Local Government in Greece

### Making Location Matter

GeoInformatics
Open Data
Business Intelligence
Environment

The Company

Copernicus is the largest program of open EO data sharing. It provides continuously, global and free satellite data from the Sentinel mission as well as other supporting data from forecasting models or in-situ measurements.

**Business Opportunity** 

Benefit for the Public

REGIONAL GOVERNMENT

### The COPERNICUS programme

### **Copernicus Application Domains**

Although there is a great market potential, Copernicus data are still not used according to the expectations.

To get the most out of the Copernicus data, technical skills are required as well as hardware (storage, performance) and software (specialized remote sensing applications) infrastructures that can handle the huge amount of data collected every day.

- Existing data access hubs are characterized by technical complexity and there are only limited options for automated data services as well as API for data access and viewing using web services.
- Thus, operational services and added value products / services are still limited.

### Bottleneck

- The Thematic Exploitation Platforms (TEPs) and the Data and Information Access Services (DIAS) are expected to facilitate data access and maximize the use of Sentinel and Copernicus data.
- Nevertheless, most of these tools are for developers, thus Public Authorities will benefit only when specific solutions will be available, designed explicitly to support their needs.

### Copernicus future

In Greece, Copernicus is still used almost only from Educational and Research Institutes

## Use of Copernicus in Public Sector in Greece

We offer **GETOpenData**, a web based platform for satellite data sharing, visualization and analysis based on Sentinel Hub by **Sinergise**.

**Customers:** 

Our solution: www.getopendata.eu

The platform supports the operations of the public authorities by providing easy access (OGC web services) to Copernicus satellite and thematic data as well as integration with SDIs (INSPIRE) & other Open Data Portals (PSI).

**Customers:** 

Our solution: www.getopendata.eu

# It is extended by advanced Artificial Intelligence (AI) and Machine Learning (ML) Capabilities from Simularity.

**Customers:** 

Our solution: www.getopendata.eu

User has **SW agnostic simultaneous one stop point access** to Copernicus satellite and
thematic data as well as national, regional
and local open data.

NEWS 09.08.2017

### Kythira fire was this year's most devastating

Fires

More than 2,300 hectares of land was burnt by the recent wildfire that swept across much of the island of Kythira,

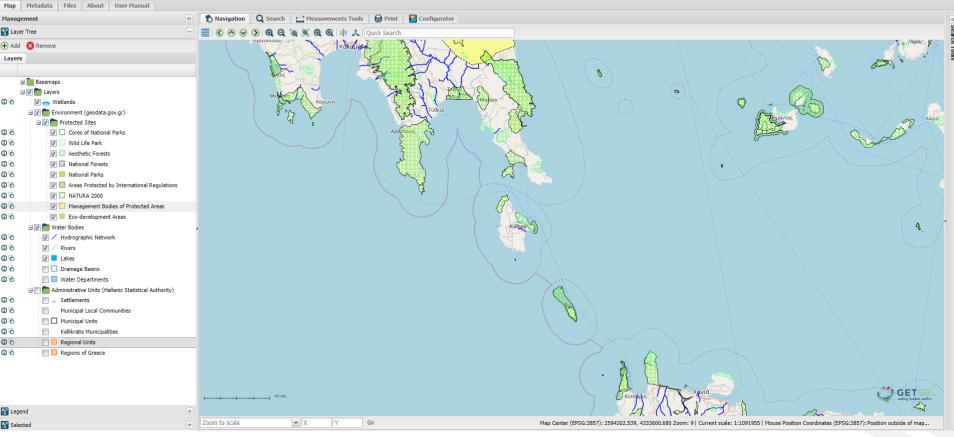

### Fire event at Kithira, Summer '17.

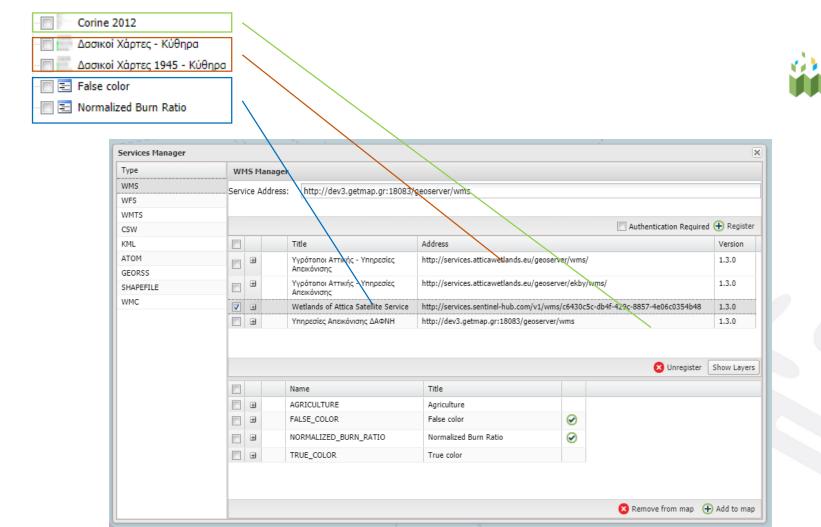

Copernicus EMS wasn't activated. By using Region's of Attica, open infrastructure, damage assessment is completed in few hours.

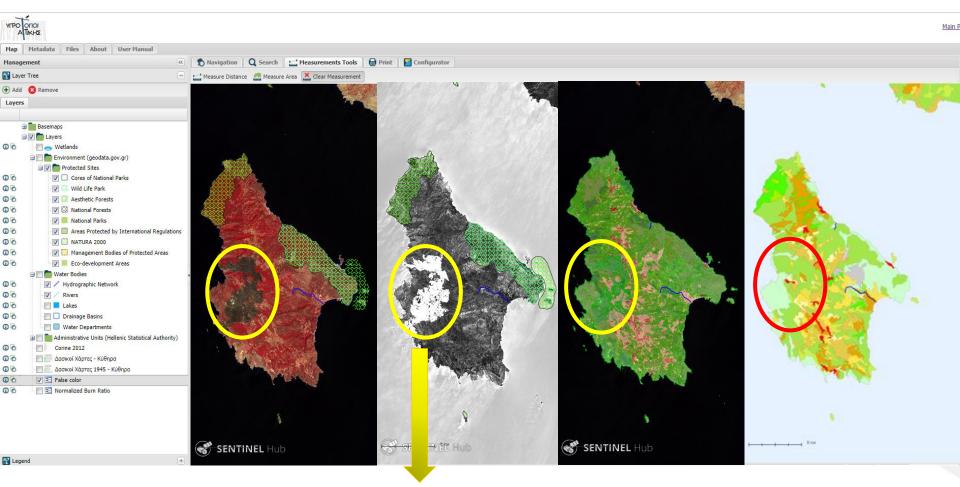

## Access through OGC web services to other open data

@(1)

Automatic calculation of burned area used for immediate damage estimation.
